

Got it 👍 You want **6 full-stack React + Node projects** where **each project** covers *all the concepts* you listed:

- React: useState, useEffect, axios, CRUD, routing with props, image upload, listing, Bootstrap.
- Node.js + Express: MVC, DB connection, CRUD, authentication middleware, image upload/delete, CORS, API with pagination/sorting/search/filters.
- **Complex relation between modules.**
- **Multiple user roles with different dashboards and permissions.**

Here's a **list of 6 projects** designed with those requirements:

◆ Project 1: Student & Teacher Management System

- **Roles:** Admin, Teacher, Student.
- **Modules:** Students, Teachers, Courses, Assignments.
- **Relations:**
 - A teacher can manage multiple courses.
 - A student can enroll in multiple courses.
- **Dashboards:**
 - **Admin** → Manage teachers/students/courses.
 - **Teacher** → Upload assignments, grade students.
 - **Student** → View enrolled courses, submit assignments.
- **Features:** CRUD, authentication, image upload (profile pics), search/filter (by course/teacher), pagination in student list.

◆ Project 2: Hospital Management System

- **Roles:** Admin, Doctor, Patient, Receptionist.
- **Modules:** Patients, Doctors, Appointments, Prescriptions, Bills.
- **Relations:**
- A patient can book many appointments with different doctors.
- A doctor can write multiple prescriptions for patients.
- **Dashboards:**
- **Admin** → Manage doctors/patients, view reports.
- **Doctor** → See appointments, upload prescriptions.
- **Patient** → Book appointments, view prescriptions.
- **Receptionist** → Manage appointments & billing.
- **Features:** CRUD, authentication middleware, file upload (reports), pagination + filtering (appointments by date/doctor), sorting (bills by amount).

◆ Project 3: E-Commerce Platform

- **Roles:** Admin, Seller, Customer.
- **Modules:** Products, Orders, Payments, Reviews.
- **Relations:**
 - A seller can upload multiple products.
 - A customer can place multiple orders.
- **Dashboards:**
 - **Admin** → Manage users, approve products, view sales analytics.
 - **Seller** → Manage products, see orders for their products.
 - **Customer** → Browse products, add to cart, place orders.
- **Features:** CRUD, authentication (JWT), image upload (product images), search + filter (category, price), pagination (products list), sorting (by rating, price).

◆ Project 4: Online Learning System (LMS)

- **Roles:** Admin, Instructor, Student.
- **Modules:** Courses, Lessons, Exams, Results.
- **Relations:**
 - An instructor can create multiple courses.
 - A student can enroll in multiple courses and take exams.
- **Dashboards:**
 - **Admin** → Manage users, approve courses.
 - **Instructor** → Upload courses, create exams.
 - **Student** → Enroll in courses, take exams, view results.
- **Features:** CRUD, authentication middleware, file upload (course materials, profile pics), pagination (course list), filtering (by category/level), searching (by course name).

◆ Project 5: Job Portal

- **Roles:** Admin, Employer, Job Seeker.
- **Modules:** Jobs, Applications, Resumes, Interviews.
- **Relations:**
 - An employer can post multiple jobs.
 - A job seeker can apply to multiple jobs.
- **Dashboards:**
 - **Admin** → Manage employers/job seekers, approve job posts.
 - **Employer** → Post jobs, view applicants, schedule interviews.
 - **Job Seeker** → Upload resume, apply for jobs, track applications.
- **Features:** CRUD, authentication middleware, image/file upload (resume, company logo), search + filter (jobs by location/salary/skills), pagination (job listings), sorting (date posted).

◆ Project 6: Real Estate Management System

- **Roles:** Admin, Agent, Buyer, Seller.
- **Modules:** Properties, Listings, Enquiries, Transactions.
- **Relations:**
- A seller can list multiple properties.
- A buyer can send enquiries for multiple properties.
- An agent can handle multiple transactions.
- **Dashboards:**
- **Admin** → Manage users, approve listings, view reports.
- **Agent** → Manage transactions, assist buyers/sellers.
- **Seller** → Upload property listings with images.
- **Buyer** → Search properties, send enquiries, track offers.
- **Features:** CRUD, authentication middleware, image upload (property images), pagination + filtering (by location, budget, property type), sorting (price, date listed).

- ✅ With these **6 projects**, every single one includes:
- **All React concepts** (hooks, axios, CRUD, routing, bootstrap, uploads).
 - **All Node concepts** (MVC, DB, CRUD, auth middleware, uploads, filters/pagination/sorting).
 - **Complex module relations** (many-to-many, one-to-many).
 - **Multiple user roles & dashboards** (with different permissions).

Would you like me to **create a roadmap (step-by-step build order)** for one project (say *E-Commerce*), so you can follow along and apply the same structure to the rest?
